## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

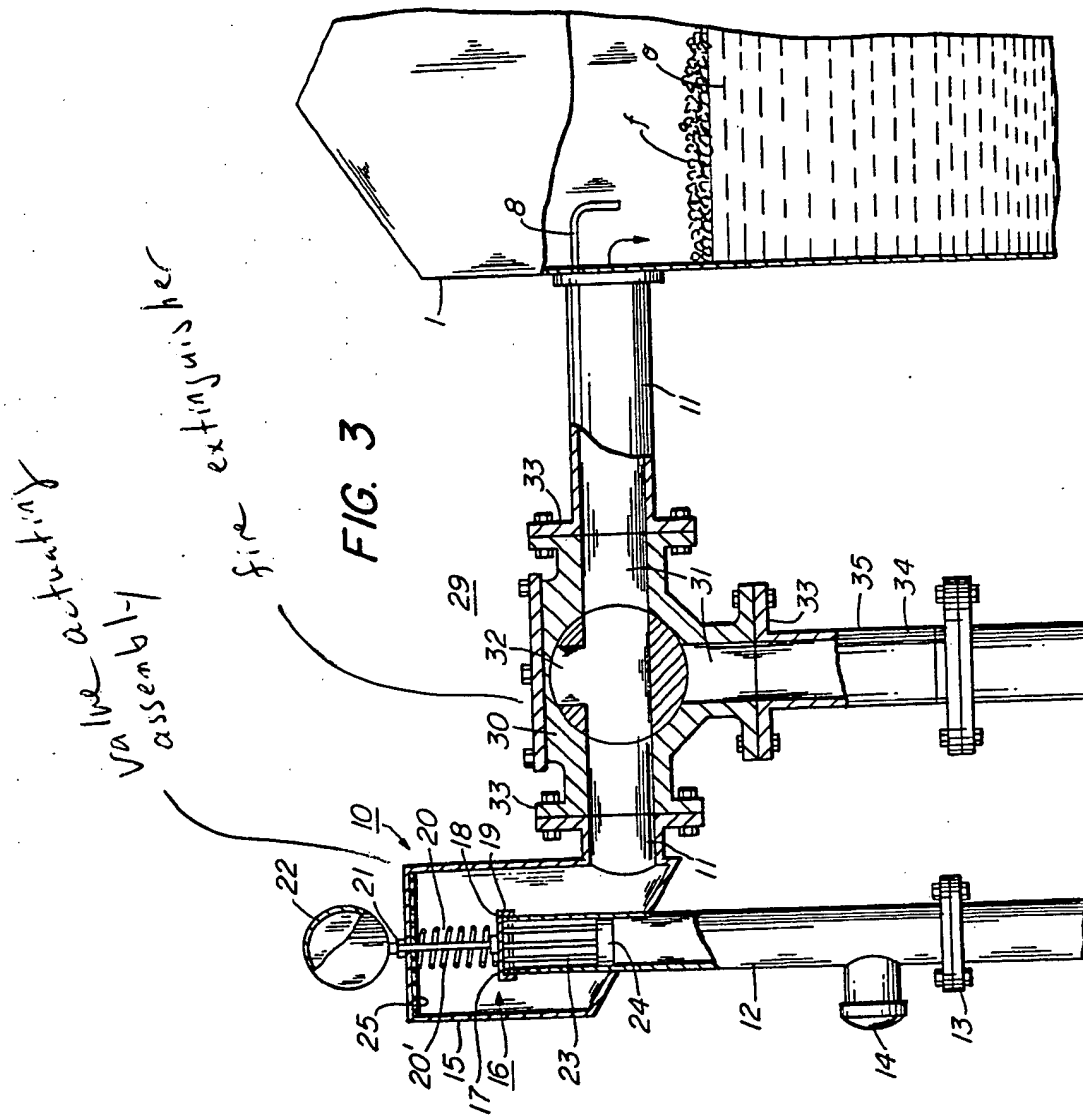

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Akatsu in view of Baron et al.

Akatsu discloses a fire extinguishing actuating and container combination device, the device being adapted for removably coupling to a fire extinguisher, the device comprising a container 1 as recited, a mounting being attached to an outer surface of the peripheral wall for mounting the fire extinguisher to the container, and a valve actuating assembly removably coupled the extinguisher (see Figure 3 attached herein). Baron et al. teach a fire extinguishing system of a storage container in which the system comprises heat and smoke sensors which activate the fire extinguishing system. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Akatsu by incorporating smoke and/or heat sensors in order to provide automatic operation of the fire extinguishing system under fire hazard conditions. It would also have been obvious to one having ordinary skill at the time the invention was made to have modified the device of Akatsu by removably mounting the fire extinguisher and the valve actuating assembly directly to the container 1 in order to be able to conveniently remove the fire extinguisher from the container if

necessary and since Akatsu already discloses that both the valve actuating assembly and the fire extinguisher are removably mounted within the device.

***Allowable Subject Matter***

3. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claim 8 is allowed.

***Conclusion***

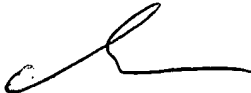

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Wilburn et al., McCulloch, Grant et al., and LcLelland are pertinent to Applicant's invention.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Davis D. Hwu whose telephone number is 571-272-4904.
